

REACT mobile

is...

Purpose-built. Our system was built from the ground up to do only one thing: protect employees in distress.

Easy to use. Our platform requires very little training or change in staff operations.

Low cost. We require very little infrastructure so the cost of implementation is low in comparison to our competitors.

Quick to install. We can install our system in less than 3 days—usually in one day.

Efficient. We have an enterprise dispatch center software that can be run in a security office or at a front desk as a central point of control for security response.

Precise. We can provide room-level accuracy for an alert within a hotel. Our platform works both on and off property, so we can protect employees on resort-style properties.

Flexible. Our system works anywhere in the world.

...the market-leading hospitality panic button platform.

React Mobile, Inc. • 720 Seneca Street #308 • Seattle, WA 98101 • 888.415.0977

Reassurance at the push of a button

ReactMobile is an open platform that can integrate with a hotel's existing technology. With ReactMobile, you aren't locked into any particular hardware or software system: you can use whatever technology you want, and we can still support you with our safety platform.

Panic Button

Bluetooth Technology

Happy Employees

All your employees have to do is turn on their ReactMobile sidekick in the morning and then go about their day as usual. If they have an emergency they can simply hit the button on the sidekick and it will send an alert to the dispatch center software.

The security staff and any emergency contacts designated by the employee will receive a notification with the employee's name and exact location. The location will be displayed on a map and will update in real time if the person changes location.

With ReactMobile, your front desk and security team can respond immediately and discreetly to ensure that all your employees remain safe at all times.

Multiple Options for Implementation

1

**SIDEKICK
+
INTEGRATION**

Our basic package includes our classic Sidekick panic button paired with existing mobile devices and hotel management software.

2

**SIDEKICK
+
BEACONS**

Our Sidekick panic button pairs with existing mobile devices and Bluetooth beacons provided by React Mobile.

3

**STANDALONE
PANIC BUTTON**

Our most robust hospitality safety solution combines our standalone LTE panic button with our Bluetooth beacon network and eliminates the need for mobile devices.

“ In my 20 years of HR this was one of the most seamless implementations I've ever been involved in. The device is simple, the training is simple. ”

- Mitch Langelier, VP of Talent and Culture, SMASHotels

“ ReactMobile allowed us to reach a housekeeper having a medical emergency. Their platform alerted our security staff with the exact room location, allowing us to reach them within minutes. ”

- Joel Moore, VP Hotel Operations, Thunder Valley Casino, CA
