

AUGMENTED REALITY SOLUTIONS FOR INDUSTRY

Deliver Time, Maintenance & Cost Savings

Augmented Reality (AR) glasses are predicted to change the way we do work in the field. By projecting information on the inside of their safety glasses, they allow technicians and engineers to view asset-specific information, images and procedures, hands-free as they view the asset.

They also allow offsite and in-office experts to use remote adviser video calling functionality whereby they can see what the field technician is seeing and can augment their vision to guide them on how to fix a problem.

AVAILABLE ON A WIDE RANGE OF MODELS

ASSET MANAGEMENT

This function provides a technician or engineer who is maintaining or inspecting an asset with all the power of a data management system linked to their existing asset database while leaving them hands-free to carry out the tasks they need to complete. The technician can view text, live data, images, videos or drawings. They can also record notes, photos and videos as they go.

LESS DOWNTIME
EXPERIENCED

WORK PROCEDURES & TRAINING

Clearly detailed work procedures or training materials can be made available to the technicians hands-free while they are at the asset and completing a task. The system reduces errors, improves adherence to the correct procedure and speeds up work times.

REMOTE ADVISER

Use the on-board forward-facing camera to allow an offsite adviser to see what the local technician is seeing and to provide feedback to them on the next steps through the headphones and using onscreen mark-ups. This function can save hours of travel and allows the most qualified and experienced person to easily weigh in on a problem whenever required.
